

Generate a Mandelbrot set with Julia

Notebook from [HelloJulia.jl](#)

Instantiate package environment:

```
• begin
•   using Pkg
•   Pkg.activate(@__DIR__)
•   Pkg.instantiate()
• end
```

```
Activating project at `~/GoogleDrive/Julia/HelloJulia/notebooks/mandelbrot`
```

Load plotting package and set in-line display type:

```
• begin
•   using CairoMakie
•   CairoMakie.activate!(type = "svg")
• end
```

mandelbrot (generic function with 1 method)

```
• function mandelbrot(z)
•     c = z      # starting value and constant shift
•     max_iterations = 20
•     for n = 1:max_iterations
•         if abs(z) > 2
•             return n-1
•         end
•         z = z^2 + c
•     end
•     return max_iterations
• end
```

```
• begin
  • xs = -2.5:0.01:0.75
  • ys = -1.5:0.01:1.5
  •
  • fig = heatmap(xs, ys, (x, y) -> mandelbrot(x + im*y),
  •             colormap = Reverse(:deep))
  • end

• save("mandelbrot.svg", fig);
```
